COMMERCIAL PROPOSAL

Company «VALGER» offers agents «HIDROREPELENT-1» and «HIDROREPELENT-SUPER» for removing rust. Production proposed by “VALGER” Ltd has no analogues in Ukraine and abroad. This agent is ukrainian invention.

Liquid protects metal constructions from water. Single handling of metal and paint coating with our liquid results in protection of metal from rust for decades. If metal is covered by rust you have to handle it with liquid to get rid of rust. If rust hangs on metal, there is no necessity to remove rust by mechanic way.

We offer two agents: first one is «HIDROREPELENT-1» infiltrates in metal to 300 mkm, second one «HIDROREPELENT-SUPER» infiltrates in metal to 400 mkm.

One liter«HIDROREPELENT-1» is enough to handle from 5 to 10 sq. m. Liquid is prepacked in capacities of 1 and 10 liters. Guaranteed time of protection of metal is 20-30 years after handling metal surfaces with this liquid.

One liter «HIDROREPELENT-SUPER» is enough to handle from 5 to 10 sq. m. Guaranteed time of protection of metal is 30-40 years after handling metal surfaces with this liquid.

Prices are indicated regarding FCA conditions Kyiv

Terms of payment – 100% prepayment.

Before 2014 this agent was actively used by russian navy for handling bottoms of sea vessels to protection from corrosion of metal. Currently, this production is used by Kyiv subway. Interaction between solution and metal surface constitutes 10-15 minutes. Metal surfaces after handling by liquid can be painted by different paints and varnishes. These agents work as primers. They can be applied on metal surfaces by brushes, rollers and sprays. It is necessary to degrease surface before use of antirust.

We hope for productive cooperation.

Best regards,
Director of “VALGER” LLC

Mykhalyova I.
